Abortion and Mothering: Research, Stories, and Artistic Expressions Heather Jackson 2021-11-15 Abortion and Mothering: Research, Stories, and Artistic Expressions is a collection of academic research, personal narratives, and art that comments on different perspectives on abortion and mothering. Scholarly research is balanced with voices and experiences from outside of academia, through the inclusion of personal narratives, poetry, and art. The collection is rooted in the idea that there are not 'women who have abortions' and 'women who have babies,' but that they are the same women at different points in their lives. By considering the intersection of abortion and mothering, and the liminal spaces in between, the reader is challenged to explore some of the culturally and socially constructed complexities that surround the decisions that people make about to their reproductive lives.

Abortion Before Birth Control Tiana Norgren 2001-07-22

Why has postwar Japanese abortion policy been relatively progressive, while contraception policy has been relatively conservative? The Japanese government legalized abortion in 1948 but did not approve the pill until 1999. In this carefully researched study, Tiana Norgren argues that these contradictory policies flowed from very different historical circumstances and interest group configurations. Doctors and family planners used a small window of opportunity during the Occupation to legalize abortion, and afterwards, doctors and women battled religious groups to uphold the law. The pill, on the other hand, first appeared at an inauspicious moment in history. Until circumstances began to change in the mid-1980s, the pharmaceutical industry was the pill's lone champion: doctors, midwives, family planners, and women all opposed the pill as a potential threat to their livelihoods, abortion rights, and women's health. Clearly written and interwoven with often surprising facts about Japanese history and politics, Norgren's book fills vital gaps in the cross-national literature on the politics of reproduction, a subject that has received more attention in the European and American contexts. Abortion Before Birth Control will be a valuable resource for those interested in abortion and contraception policies, gender studies, modern Japanese history, political science, and public policy. This is a major contribution to the literature on reproductive rights and the role of civil society in a country usually discussed in the context of its industrial might.

Abortion Rights as Religious Freedom Peter Wenz

1992-01-06 "This excellent books is bound to stir debate on the abortion issue and to occupy a rather distinctive position." --R.G. Frey, Bowling Green State University With the current composition of the Supreme Court and recent challenges to Roe v. Wade, Peter S. Wenz's new approach to the ethical, moral, and legal issues related to a woman's right to elective abortion may turn the tide in this debate. He argues that the Supreme Court reached the right decision in Roe v. Wade but for the wrong reasons. Wenz contends that a woman's right to terminated her pregnancy should be based, not on her constitutional right to privacy, but on the constitutional guarantee of religious freedom, a basis for freedom of choice that is not subject to the legal criticisms advanced against Roe. At least up to the 20th week of a pregnancy, one's belief whether a human fetus is a human person or not is a religious decision. He maintains that because questions about the moral status of a fetus are religious, it follows that anti-abortion legislation, to the extent that it is predicated on such "inherently religious beliefs," is unconstitutional. In this timely and topical book, Wenz also examines related cases that deal with government intervention in an individual's procreative life, the regulation of contraceptives, and other legislation that is either applied to or imposed upon select groups of people (e.g., homosexuals, drug addicts). He builds a concrete argument that could replace Roe v. Wade. Reviews "In this important study of abortion and the Constitution, legal philosopher Peter Wenz contends that Roe v. Wade was wrongly argued but well concluded. Wenz presents a substantial review of Supreme Court decisions on abortion, then critically exposes flaws, including the privacy justification for abortion as well as the trimester scheme. --Religious Studies Review "In this major work, Peter Wenz has analyzed the relation of the

Constitution's religion clauses to the abortion controversy. His principal contribution is to shift the argument from the right of privacy (invoked, he believes, unsuccessfully in *Roe v. Wade*) to the Establishment Clause. The Court's concern in *Roe* was whether the statute unduly burdened a fundamental right. But tested by the Establishment Clause, statutes may violate the Constitution by implicitly endorsing a religious belief, namely, the personhood of the unborn. Wenz concludes that the Establishment Clause permits abortions prior to the twenty-first week of pregnancy."

--C. Herman Prichett, Professor of Political Science Emeritus, University of California, Santa Barbara "This is an original and scholarly exposition of the view that abortion rights fall under the religion clauses of the First Amendment. The view defended is an important alternative to the privacy defense upon which the *Roe v. Wade* decision was based and should help to expand the ethical and constitutional debate about abortion rights."

--Mary Anne Warren, Associate Professor of Philosophy, San Francisco State University, and author of *Gendercide: The Implications of Sex Selection*

Abortion, Sin and the State in Thailand Andrea Whittaker 2004-07-29 This book discusses abortion in a non-Western, non-Christian context - in Thailand, where over 300,000 illegal abortions are performed each year by a

variety of methods. The book, based on extensive original research in the field, examines a wide range of issues, including stories of the real-life dilemmas facing women, popular representations of abortion in the media, the history of the debate in Thailand and its links to politics. Overall, the work highlights the voices of women and their subjective experiences and perceptions of abortion, and places these 'women's stories' in an analysis of broader socio-political gender and power relations that structure sexuality and women's reproductive health decisions.

Abortion in the USA and the UK Colin Francome 2017-05-15
Recent years have revealed the different experiences of abortion in the UK and the USA. The United States has a higher abortion rate accompanied by a higher political profile for the issue. In fact, one of George W. Bush's first acts in 2001 was to ban American funding for overseas organizations carrying out abortions. The USA has also experienced a higher degree of abortion-related violence, with several people linked to abortion services being targeted and even killed. Compelling and enlightening in its approach, this invigorating volume compares the two countries' abortion laws and outlines the distinctions. The usually conservative American society has a much more liberal abortion law than the United Kingdom, whose female citizens can obtain an abortion relatively easily although in fact they do not have the right to choose. This stimulating volume examines the comparative positions taken by each country and makes important suggestions for the future.

On Abortion Laia Abril 2018-01-18 'On Abortion' is the first part of Laia Abril's new long-term project, 'A History of Misogyny'. The work was first exhibited at Les Rencontres in Arles in 2016 and awarded the Prix de la Photo Madame Figaro and the Fotopress Grant. Abril documents and conceptualises the dangers and damage caused by women's lack of legal, safe and free access to abortion. She draws on the past to highlight the long, continuing erosion of women's reproductive rights through to the present-day, weaving together questions of ethics and morality, to reveal a staggering series of social triggers, stigmas, and taboos around abortion that have been largely invisible until now.

Abortion Shannon Stettner 2017-12-01 When Henry Morgentaler, Canada's best-known abortion rights advocate, died in 2013, activists and scholars began to reassess the state of abortion in the country. In this volume, some of Canada's foremost researchers challenge current thinking about abortion by revealing the discrepancy between what Canadians believe the law to be after the 1988 Morgentaler decision and what people are experiencing on the ground. Showcasing new theoretical frameworks and approaches from law, history, medicine, women's studies, and political science, these timely essays reveal the diversity of abortion experiences across the country, past and present, and make a case for shifting the debate from abortion rights to reproductive justice.

A Pastoral Intervention Model For Abortions In Mangaung Metropolitan City Moshe Montlha Musapelo 2020-04-30 Master's Thesis from the year 2019 in the subject Theology - Practical Theology, , course: MTh in practical theology, language: English, abstract: This text looks at the issue of unwanted pregnancies and their termination from a theological perspective against the background of the Pregnancy Act 199 (COTP) and my pastoral concern. The failing family planning program of the Department of Health has contributed to this moral controversy as some women use the termination of pregnancy as a birth control method. The termination of pregnancy in South Africa has become a controversial issue affecting communities and the health professionals since the implementation of the Choice on the Termination of Pregnancy Act 199 (COTP). This Act has imposed a moral dilemma for many health professionals and for many contemplating abortions. This has come about in that it provides for abortion on demand in the first trimester. It has also caused many Christian pastors and other citizens great concern due to the rise in the number of abortions. This study starts with a literature review to highlight the various facets and views surrounding the explosive issue of abortion on demand. This opens the parameters within which this matter needs to be engaged. Then the details of an empirical research conducted at three designated facilities of the Department of Health in Mangaung Metropolitan City are presented. The health professionals that conduct abortions were interviewed as well as sixty clients that underwent this procedure under their service. The research investigated both groups' experience under COTP. It explores not only the counselling side, but also reasons for abortion and related emotions and concerns of both health workers and clients. Further, the research probes their religious views and church attachments (if any) and how they relate to this controversial issue. Then the two main theological views on termination of pregnancy on demand

are considered. This part of the study seeks to arrive at a biblically normative position. It considers the biblical worldview and the high view it places on human life. It concludes that the pro-life position, Christian morals and moral regeneration, and family planning should be central programs, and are crucial in dealing with abortion on demand. Finally there is a formulation of a pastoral intervention model for the pastors in the churches in Mangaung Metropolitan City with some attention to recommendations for the Department of Health.

Abortion, Sin, and the State in Thailand Andrea M. Whittaker 2004 Although abortion remains one of the most controversial issues of our age, to date most studies have centered on the debate in Western countries. This book discusses abortion in a non-Western, non-Christian context - in Thailand, where, although abortion is illegal, over 200,000 to 300,000 abortions are performed each year by a variety of methods. The book, based on extensive original research in the field, examines a wide range of issues, including stories of the real-life dilemmas facing women, popular representations of abortion in the media, the history of the debate in Thailand and its links to politics. Overall, the work both highlights the voices of women and their subjective experiences and perceptions of abortion, and in addition places these 'women's stories' in an analysis of broader socio-political gender and the power relations - national and international - that structure sexuality and women's reproductive health decisions.

Are the concepts of free choice and personal responsibility fundamentally different in Germany and the USA? Maxi Gülay 2017-11-02 Research Paper (postgraduate) from the year 2016 in the subject Psychology - Social Psychology, grade: 1,0, İzmir University of Economics (Psychology), language: English, abstract: Free choice is a gain as well as a burden for humans. As the philosopher Jean-Paul Sartre put it, freedom does not just give you the gain of free choice but also the burden of being responsible for all your actions. This proposal wants to explore the concepts of free choice and personal responsibility in two individualistic countries, namely Germany and the USA. The Freedom of Choice Act was passed in 2007 by the American Congress. This bill protects the right of women to choose if they want to bear a child (Guttmacher Institute, 2016). This basically means that women can have an abortion until the fetus is able to live on its own. It is important to notice that the Freedom of Choice Act is only legal in seven states of the US. For all arguments, it holds true that laws vary very much

from state to state. Anyway, the important point is that most states allow abortion within a certain time frame and the woman has to make the final choice. She has full responsibility for her decision. In Germany, abortion is technically always illegal. Nevertheless, there are exceptions within the first 12 weeks that make an abortion free of punishment (Strafgesetzbuch §218). A pregnant woman has to undergo a pregnancy conflict consultation which is offered by social institutions. The consultant talks with the woman about her wish to get an abortion explaining her about the consequences of an abortion and informing her about all the possibilities she has, e. g. adoption, governmental support etc. In the end, the woman receives a confirmation about undergoing this consultation. With this confirmation she can have an abortion. So in both countries, the reality is the same. Within a certain time frame, woman have the legal freedom to have an abortion. The idea behind is different: In the USA, full responsibility lies with the woman. In Germany, noticing that abortion is a troubling situation for a woman, the state takes responsibility to inform her about all possibilities so that she is able to make a responsible decision on her own. Hence, the USA applies a radical view of free choice resulting in total personal responsibility. Germany applies a more egalitarian view of free choice resulting in socially embedded personal responsibility.

Surrendering the Secret - Bible Study Book Pat Layton 2019-01-15 Many women hide the secret of abortion deep in their hearts and they are suffering severe consequences. They carry a great burden of shame and failure, afraid to reveal their hidden pain, and by doing so are forced to endure the long-lasting effects in isolation. Surrendering the Secret will allow women to release this burden and find freedom through 'redemptive community' while experiencing hope and joy, as shame and failure are replaced with beauty. Author Pat Layton, founder and president of A Woman's Place Ministries, helps women find the path to healing through honest interactive Bible study, meaningful group experiences, and caring community. Benefits: Ideal for promotion during sanctity of human life emphasis Ministry and recovery for women who have experienced pain and shame of abortion; helps them reconnect with church if they are not involved Help ministry leaders know how to intentionally minister to women in pain and subsequent recovery and healing post-abortion

Should abortion be legal? Faith Kamau 2014-04-10 Essay from the year 2010 in the subject Sociology - Medical Care, grade: B, The University of Texas at Austin, language: English, abstract: From research which was carried by the World Health Organization, there are about four thousand abortions made every single day in America. And world wide, the numbers of abortions in a single day are about one hundred twenty thousand. The issue on whether abortion should be legalized is still bothering many people's minds and the question is, what is abortion? This can be referred to as pregnancy destruction accidentally in form of a miscarriage or by someone's willed. Therefore we would be weighing the merits and demerits of abortion and discover if abortion legalization is a significant right women should have. Abortions that come up as a result of rape and possible health concerns to a mother are about 7% from the research made by doctors. But social and personal factors are the major cause for most of the abortions. *Abortion - the Debate* Ross Brillantes 2021-07-08 This book has been prompted, encouraged, enticed to be written by the powerful force of persecution against the weaker sex. There is so much dominant ignorance, fallacy, ungodly, irrational belief as to why they are being denounced for the exercise of free will, free choice. The denunciations, the incarceration of agenda-violators have their own merits but there is a need to

investigate the basis/bases upon which they are founded. The inquiry goes deeper than the accusing fingers and from the defensive hands. There has to be a biblical, rational, scientific basis to mellow down the confrontation which results to social injustice. In the aspect of biblical, rational, scientific basis, the sub-issues of morality, gender orientation, God-Question, man-made agenda, killing, soul, human being, human life, fetus, union of sperm and egg cell, miscarriage, after life, related matters being taken up. In a nutshell this work is intended to provide some academic education for people into the state of discernment, into rationality so the millions of embittered, angry souls can soften the imposition of their vested, impassioned agenda.

Essays on Fertility Choices and Labor Market Inequality

Tom Zohar 2021 This dissertation combines three essays studying the relationship between fertility decisions and labor market inequality. The first chapter studies the effect of providing abortions for free on women's fertility decisions and career outcomes. The second chapter looks at the importance of family's income on access to better paying firms. The third chapter studies how does growing up relatively poor or rich in school affects human capital labor-market outcomes in adulthood. In Chapter 1 we study the effects of abortion access on fertility and women's career outcomes. To establish causality, we leverage a policy change that in 2014 increased the eligibility age cutoff for free abortion in Israel. We use newly constructed administrative data that allows us to track abortions, births, employment, earnings, and formal education for the universe of Israeli women over a seven-year period. We show that access to free abortion increases the abortion rate but does not increase conceptions.

Instead, the result is driven by more abortions among poor women who live in religious communities in which abortion is socially stigmatized. This finding suggests that when abortion is free, poor women do not need to consult family members for financial support, which allows them to have an abortion in private. In the medium-run, access to free abortion delays parenthood, increases human capital investment, and shifts employment towards the white-collar sector, suggesting a large career opportunity cost of unplanned parenthood. Finally, we show that if the government's objective is to remove financial constraints to abortion access, means-tested funding does a better job than the existing age-based policy. In Chapter 2 we revise the intergenerational mobility literature from the firm's perspective. It has been widely documented that there is

a strong relationship between parents and children's earnings. A separate strand of the inequality literature has shown that differences in firm pay premiums contribute substantially to the distribution of earnings. In this paper, we quantify the role of access to better-paying firms on intergenerational mobility in Israel. Using job switchers to identify firm wage premiums, we find that differences in access to better-paying firms are responsible for 17% of the intergenerational earnings elasticity. About half of this pattern is due to the fact that firms amplify the effect of worker's productivity. Another quarter is due to sorting of certain ethnicities to better paying firms. In Chapter 3 we ask -- How does growing poor (or rich) relative to one's peers predict lifetime earnings? Using administrative data of the entire Israeli population, we answer this question in the context of childhood location and school environments. We condition on family resources and locations. Our preliminary results suggest locally rich kids have higher earnings in adulthood compared to their peers from median earning households in their city. Furthermore, being of high rank within a locality boosts one's high-school and post-secondary degree diploma.

Abortion Policy Jerome S. Legge 1985-01-01 In the first study of its kind, Jerome Legge provides a reasoned and dispassionate summary of the procedures and effects of abortion. The ethics of abortion have been widely discussed by philosophers, social scientists, and health professionals. Until now, however, little has been devoted to the results of various abortion policy changes. Legge examines the effects of abortion policy changes on maternal and infant health in the United States, Great Britain, and Eastern Europe. He looks at both liberal and restrictive abortion policies, demonstrating the importance of historical and cultural context on the outcome of policy changes. Abortion Policy makes available the latest research in the field. It addresses many of the questions evaded in the moral debate on abortion: Have legal abortions lowered the overall number of abortion deaths? Has maternal health improved for society as a whole? Has infant and fetal mortality been reduced? How and to what extent does abortion policy interact with other societal interventions such as health spending and contraception?
